

HACK VS · FOIRE DU VALAIS

Never a stranger at the Club again.

Real encounters.

A network that lasts all year.

Working prototype · FR / DE / EN

THE CHALLENGE → OUR SOLUTION

A network that only lives on event nights.

≈ 50 leaders · 4–5 evenings a year.

Newcomers arrive as strangers. Familiar faces stay together.

01 · FIND

Member cards

Discover people, passions and what they can help with.

02 · SYNERGIES

3 introductions

Meet someone new, with a reason to start talking.

03 · MEET

Real encounters

QR badges, people bingo and rotating dinner tables.

04 · BELONG

Keep the Club alive

Shared milestones, member news and personal invitations.

Members only · no forced selling · French / German / English

Camille knows who to look for.

1 Nothing to install

Open the site, sign in, explore the members' album.

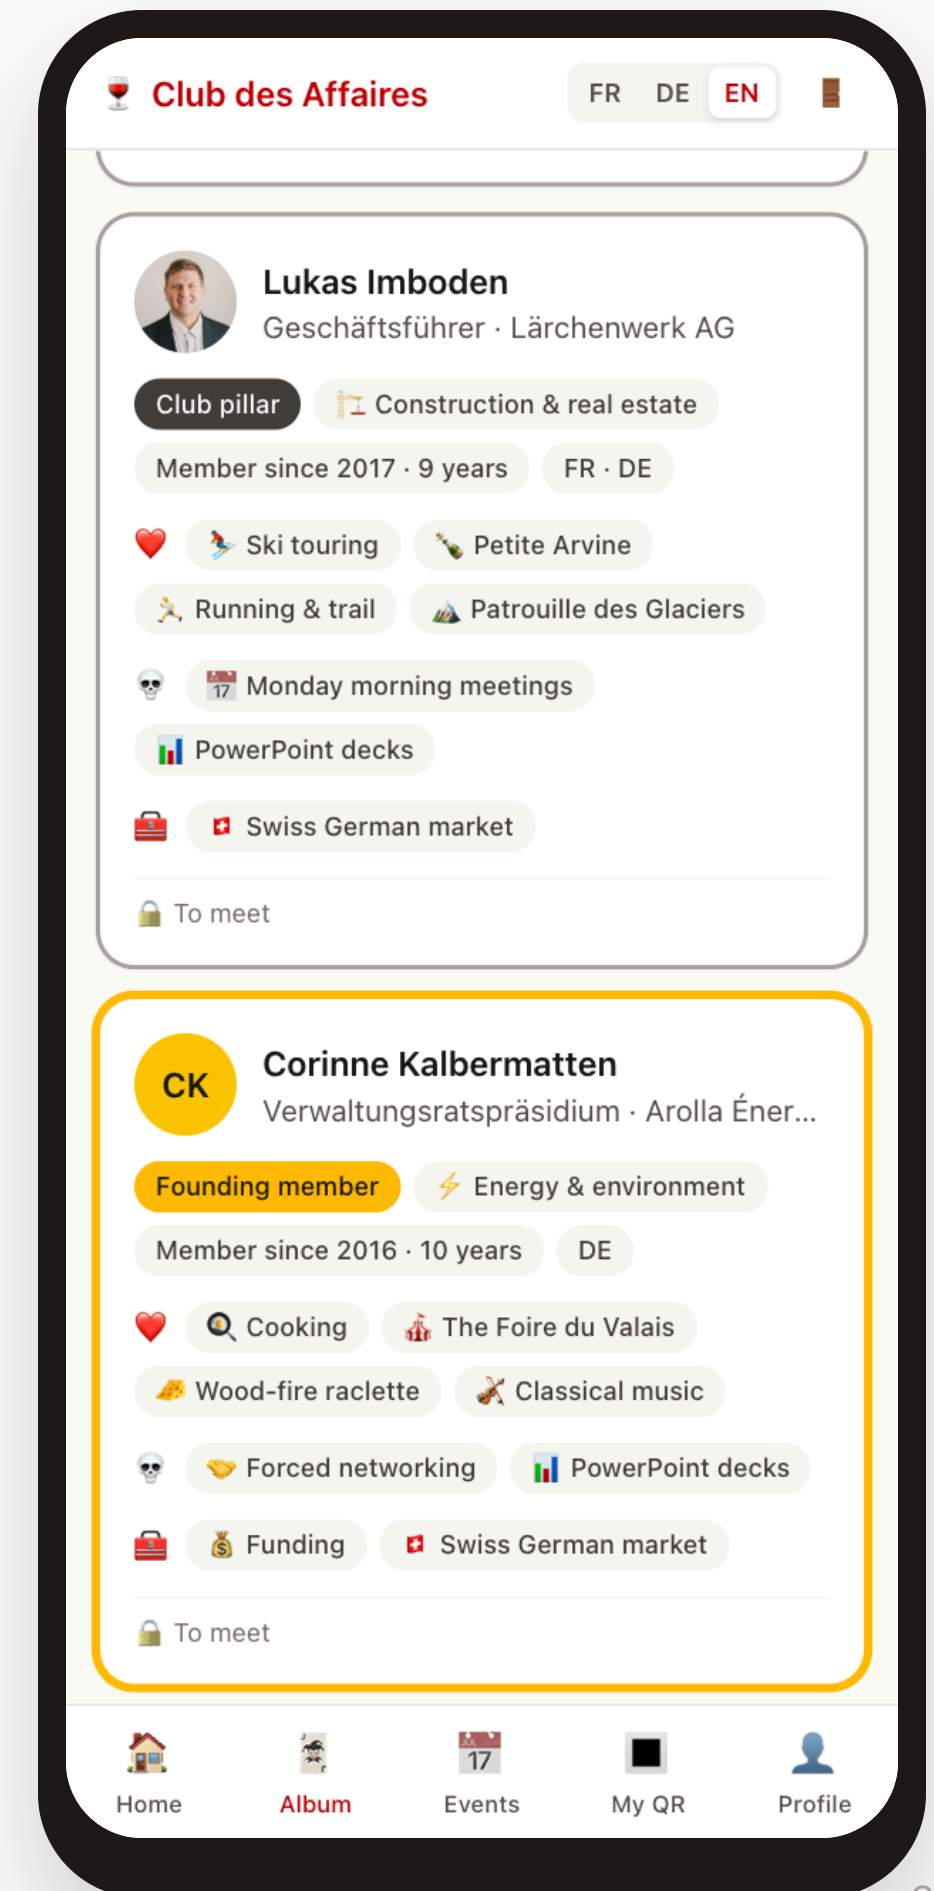

2 A reason to connect

Three introductions based on shared passions and complementary needs.

Camille ↔ Lukas

Digital & AI ↔ Swiss German market.

Petite Arvine gives them something to talk about.

A badge becomes a real connection.

1 Meet, scan, confirm

The card joins Camille's album. Contact details unlock.

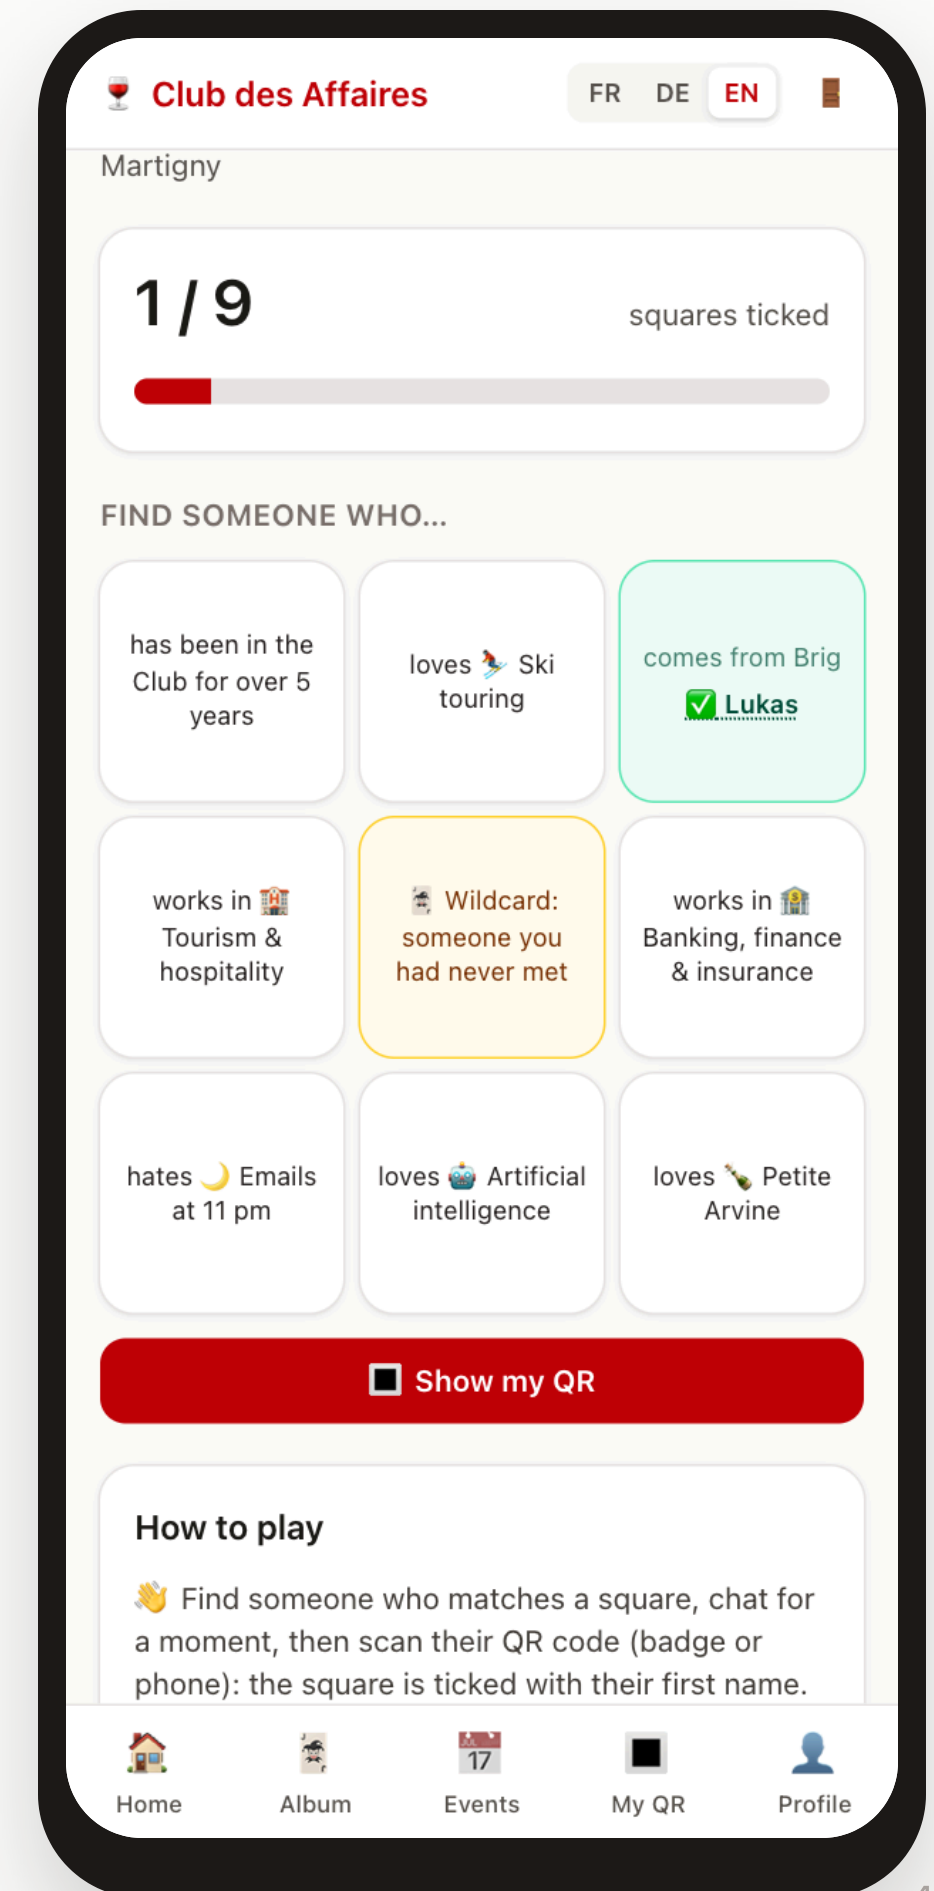

2 Break the ice

A personalised bingo nudges her towards new people.

3 Make it count for everyone

Every encounter moves the Club towards a shared milestone.

Demo: 15% connected → next milestone at 20%.

The next encounter starts here.

1 Bring people back

Event announcements + reminders only if no reply.

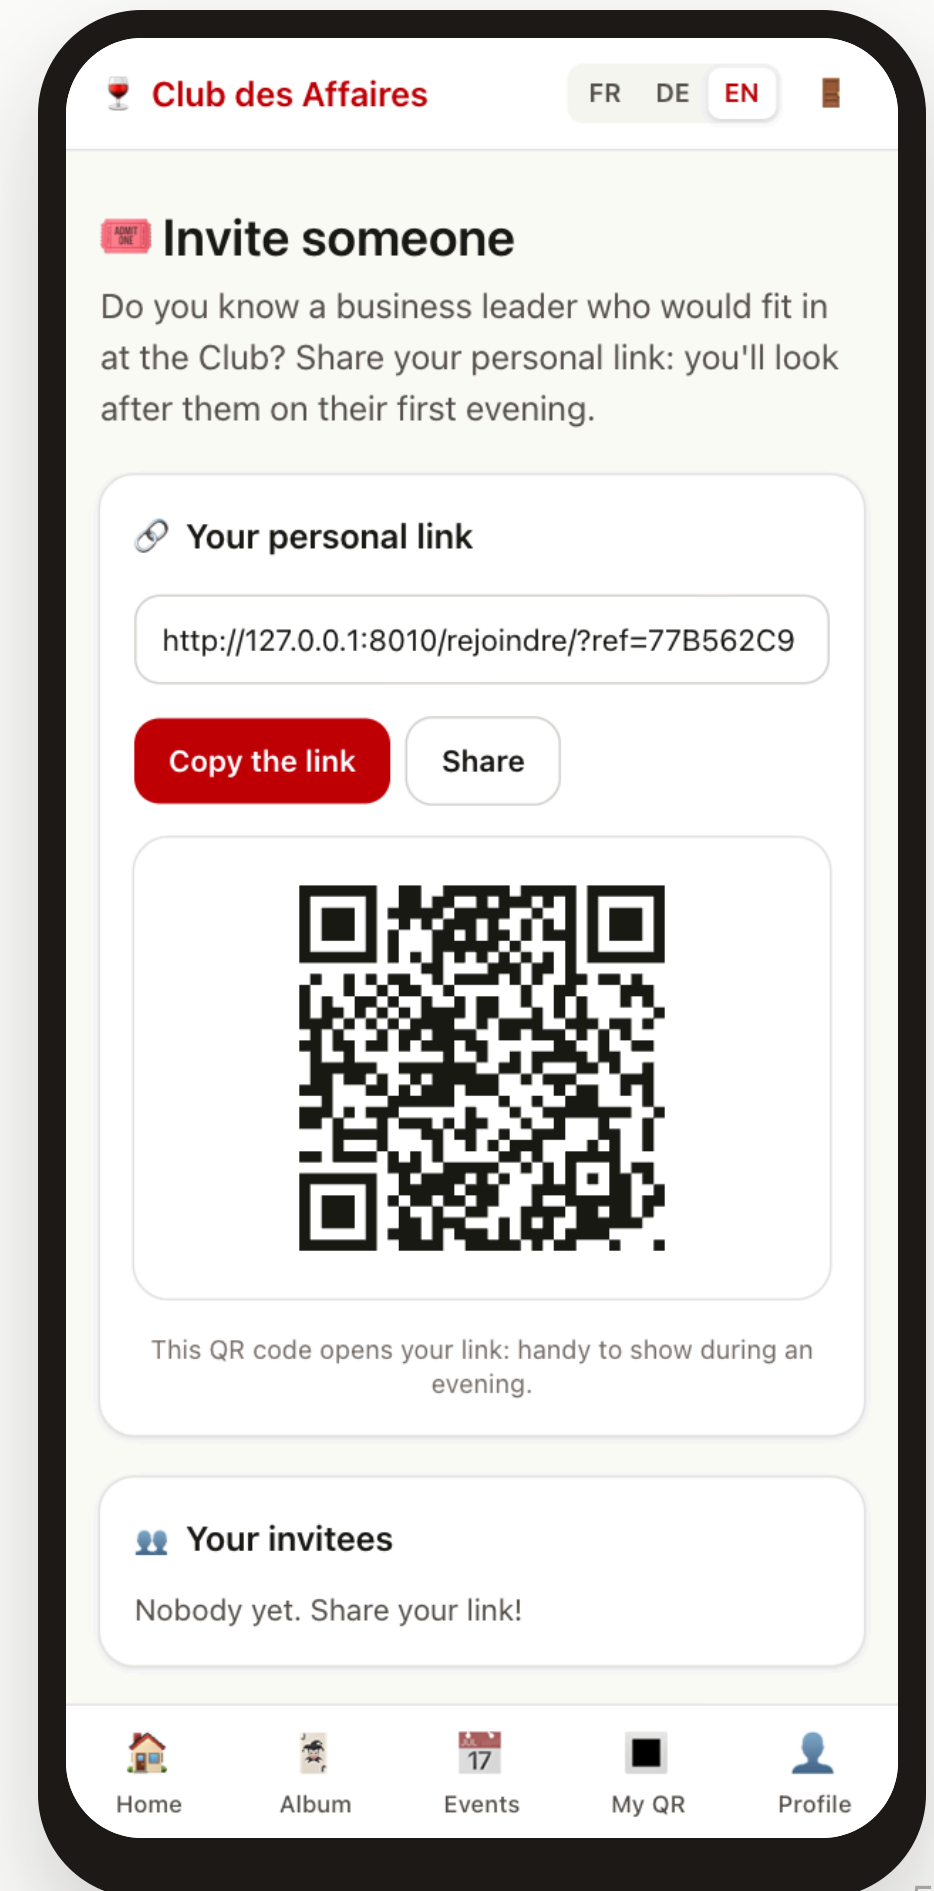

2 Introduce the newcomers

One monthly digest, with consent. No email per signup.

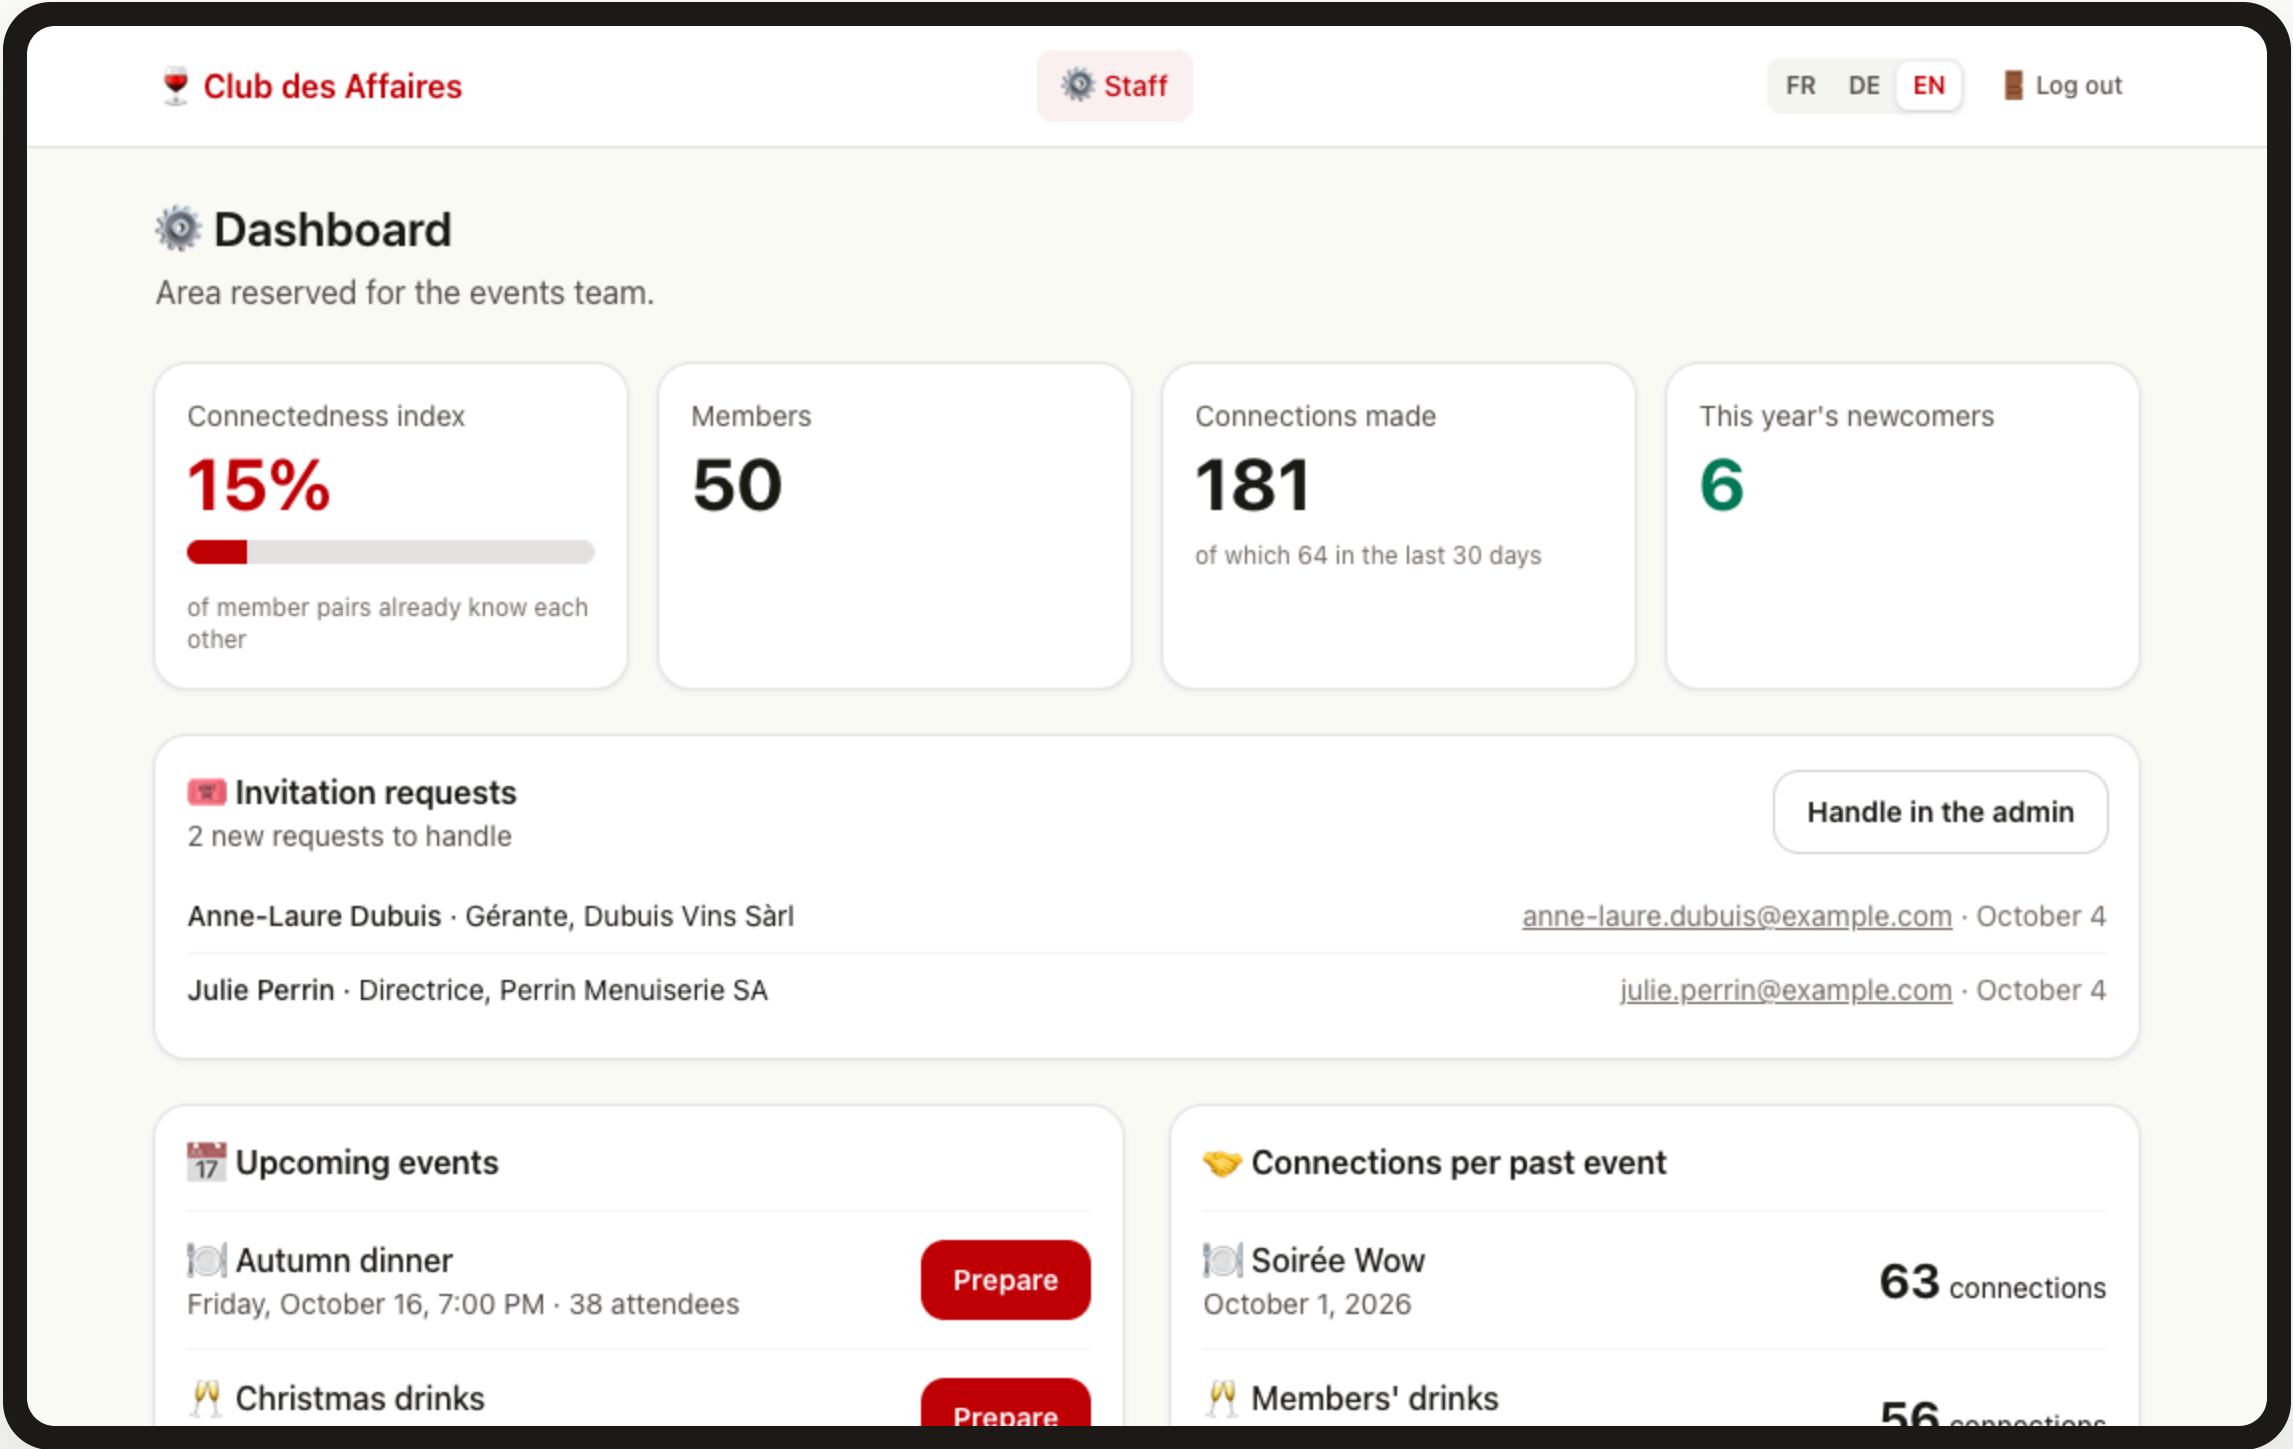

3 Invite someone you trust

Each member gets a personal referral link and QR.

Email workflows prepared · sending activated at launch.

Less preparation. More people mixing.

Club des Affaires · One dashboard for a small team

- 1 **See the Club**
Members, real encounters and shared milestones.
- 2 **Prepare the evening**
Generate introductions, badges and rotating tables.
- 3 **Welcome the isolated**
Identify members who need a first introduction.

Shown: 38 guests · 3 courses.

A club that knows itself comes back together.

≈ 30 CHF

per month to run in Switzerland

Hosting, database, backups, emails, domain.

Budget estimate · CHF 300–450/year.

Setup ≈ CHF 20, excluding development.

New development quoted separately.

Today · the working prototype

Member journey + tools for the event team.

Launch · before the next evening

Swiss hosting, member import, email activation.

Later · according to the Club's needs

Online membership payments. For now: manual invoices.

APPENDIX

For the questions.

A1 What is new · A2 Feasibility · A3 Architecture · A4 Algorithms · A5 Security & privacy · A6 Go-to-market · A7 Costs & more features

A1 · WHAT IS NEW

Every real encounter counts — and is counted.

A collectible album

A QR scan is the proof you really met: only then do contact details unlock. No cold messages, no spam.

15 % connected → shared milestones

The share of member pairs who know each other. At 20 %, a round of Petite Arvine; at 35 %, a raclette; at 100 %, “never a stranger”.

A bingo computed for each guest

Only people present tonight, nudging you to strangers and to your 3 introductions; a full card is always possible (bipartite matching).

Rotating tables that really mix

38 guests, 3 courses: about 250 new pairs in the recorded example. A Social Golfer heuristic, computed in under a second.

A2 · FEASIBILITY

It works today.

- **Django 5.2 LTS**, server-rendered, PostgreSQL: one framework, few moving parts
- **Secure by default**: closed to visitors, strict CSP, tested access matrix, contacts only after a real meeting
- **401 automated tests**, every page checked in FR / DE / EN on phone and desktop
- **For a small team**: create the event, tick an activity, click “Prepare”. Accept a member: one click

“A club that knows itself comes back together.”

Next: launch for the Club, then grow from 50 to 100 members through referrals.

A3 · ARCHITECTURE

Boring technology, on purpose.

Members & staff
Phone or computer browser · nothing to install · a QR code opens the right page · FR / DE / EN

Django 5.2 LTS · gunicorn
Member area · staff tools · Django admin (back office) · public showcase
services/: matching · rotating tables · bingo · federation index & milestones · notifications & digest — pure Python, unit-tested

Data & delivery
PostgreSQL (SQLite in dev) · SMTP for e-mails · static files served by the app (no CDN, no tracker) · Swiss hosting for production

CHOICE	WHY
Web app, not native	Nothing to install for 50 busy people; one code base instead of three
Server-rendered templates	No API to expose and secure, light pages on mobile, strict CSP possible
Django admin	A complete, secure back office from day one, in the staff's language

A4 · ALGORITHMS

Four algorithms, measured.

WHAT	HOW	MEASURED
Your 3 introductions	Pair score: +3 shared passion, +2 shared pet peeve, +2 different sectors, +3 newcomer with a pillar, + a bonus when one can meet the other's need. Never two people who already know each other, never without a common language. Fair greedy rounds.	200 guests: 49 ms
Rotating tables	Social Golfer problem (NP-hard): local search with restarts; penalties for sitting together again, no common language, already acquainted, same sector.	200 guests: 0.8 s
People bingo	Per-player grid from tonight's guests only; priority to strangers and to your introductions; a full card stays possible (bipartite matching, augmenting paths); a scan ticks the rarest square.	49 tests
Federation index	Density of the “who met whom” graph = connections ÷ member pairs; drives the Club milestones and lists isolated members for the staff.	demo: 15 %

A5 · SECURITY & PRIVACY

Closed by default.

Application security

Login required everywhere (middleware) · tested access matrix: a new route must be classified or the suite fails · CSRF on every form · strict CSP, no inline script or style · QR codes carry 128-bit random tokens · single-use login links (15 min) · HTTPS, HSTS, secure cookies.

Data protection (Swiss nLPD)

Directory visible to members only · contact details shared only after a real meeting · any member can hide their card · private notes visible to their author only · photos served privately · minimal data · Swiss hosting planned for production.

A6 · GO-TO-MARKET

No ads. Invitations.

CHANNEL	HOW
Referral (n°1)	Each member has a personal link and QR code; an optional referral discount, to be validated by the committee
Discovery guest	At the Christmas drinks, each member may bring one person: an evening sells better than a brochure
Substitutes	A member who cannot come sends a colleague, who receives the evening's details and an invitation
Foire exhibitors	20–30 hand-picked exhibitors invited by letter; members invite one exhibitor to the Wow evening
Upper Valais	German-speaking ambassadors; one drinks evening a year hosted by a member in the Upper Valais

Goal: 15–20 new members a year, at most 5 newcomers per evening, more than 60 % via referral.

A7 · COSTS IN DETAIL

Small costs. Room to grow.

Cost

Running: about CHF 30 a month (Swiss hosting with database, backups, e-mails, .ch domain), i.e. CHF 300–450 a year. Setup, excluding development: about CHF 20 (the domain). Development: only if new features are requested, on quote. Infomaniak Jelastic Cloud starts at CHF 6.31 a month per small container; Exoscale is a pricier Swiss alternative (database alone ≈ CHF 42 per 30 days, before tax).

Roadmap

Launch Swiss hosting, member import, email activation. **Later** “I'm looking for / I offer” board, co-development groups, membership payment (TWINT, QR-bill). **Possible later:** the same platform for other clubs of the Foire network.

Also implemented: private notes · normalised profile photos · temporary substitutes · communication language.
